re: Docket #W-01782A-05-0236; Decision #68693

Dear Commission,

As ordered by the Commission, Abra herein submits its plan for meeting anticipated growth.

Abra has installed and is operating an Arsenic Treatment plant per Federal Government Regulations. Due to the nature of the treatment process, Abra has installed an additional 24,000 gallon storage tank and booster pumps to boost the treated water to the 250,000 gallon storage tank on the hill.

With the additional storage and new booster pumps installed, we will be able to produce approximately 400 gpm to the storage tank and distributions system, increasing our capacity by 125 gpm. This increase will be sufficient to meet projected growth for the next several years.

Abra has a second well that can produce 200 gpm, but will require arsenic treatment at the site. We can install another arsenic treatment plant at that location to accommodate more growth when it becomes necessary.

As demand grows, Abra will be able to drill backup wells and increase the capacity of the arsenic treatment facilities according to need. The arsenic building is of sufficient size to expand and Abra has enough land available to drill additional wells. The groundwater aquifer of the Big Chino Basin is proven to be of sufficient size to meet all anticipated growth. We do not foresee any problems in keeping up with future demand and growth.

Sincerely,

Kevan Larson
President
